BEST PRACTICE

HEALTH SERVICES (Blood Group and Hemoglobin Checkup)

Blood group and hemoglobin checkup is a best practice of our college.

Under this activity blood group and hemoglobin of girls admitted to first year are checked in the beginning of academic year. Teachers and students from department of Microbiology are involved in this activity. Those girls whose blood hemoglobin is found below levels are suggested with a diet that can help in increasing their hemoglobin. Public health center of Zilha parishad, Nashik and Cantonment board Deolali camp provides free iron tablets that are distributed among girl's students.

Year	<u>Blood groups</u>								Total Number of Beneficiaries
	A+ve	B+ve	AB+ve	O+ve	A-ve	B-ve	AB-ve	O-ve	
2015-16	23%	36%	17%	14%	2%	2%	2%	4%	297
2016-17	20%	29%	21%	15%	1%	3%	2%	9%	320
2017-18	14%	28%	21%	17%	3%	5%	4%	8%	431
2018-19	16%	32%	17%	16%	3%	4%	2%	10%	354
2019-20	14%	34%	17%	22%	1%	3%	1%	8%	343

Year	Blood Hemoglobin					Total Number of Beneficiaries
	6 to 6.9	7to7.9	8 to 8.9	9 to 9.9	10 onwards	
2015-16	0%	5%	13%	23%	59%	297
2016-17	2%	8%	15%	22%	53%	320
2017-18	3%	9%	15%	24%	49%	431
2018-19	6%	9%	13%	27%	45%	354
2019-20	3%	7%	13%	30%	47%	343

Evidences of Success

- This practice has succeeded in developing awareness about anemia.
- It has helped in improving hemoglobin percentage in anemic girls.
- It has helped in identifying girls with Rh negative blood groups. These girls were counselled related to importance of Anti – D injections and consequences related to pregnancy.
- This practice has helped in creating awareness regarding natural diet that can help in maintaining hemoglobin at optimal levels.

BEST PRACTICE

Drinking Water testing of college staff and students

Water used for drinking purpose is a source of many water-borne diseases. Prior checking is always helpful for prevention of these water-borne diseases. Bacteriological analysis of water is best practice of our college. It involves water quality parameter testing for indicators of contamination.

Under this activity water samples were collected from various sources by staff, students and community in sterile containers provided by Microbiology department of the college and was analyzed for potability by using MPN (Most probable number) method. R.O water is collected from public places and hotels. Package water was collected from containers. The bacteriological test indicates the physical parameters and the positive or negative presence of total coliform bacterial count which results the water is potable or not. According to results for contaminated water some recommendations were provided for safe drinking water which should have balanced pH level, be contaminant free, rich with healthy naturally occurring minerals.

Evidence of success

This practice developed awareness about safe and hygienic drinking water amongst staff and students.

- This facility is helpful to students from rural areas and agricultural background.
- It is free for all students and staff. It saved time and money
- Practical skills of final year B.Sc. students were improved.
